Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Aubrie Aldridge
4906 Avenue H
Austin, TX 78751-2531

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Doris Munger

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Irma Grieve

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Gary Hertzog
51 Ash Rd
Hamburg, PA 19526-8968

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Crystal Miro

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Richard Giallanzo
8 Pinewood Dr

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. George Picchioni
1923 Colden Ave
Bronx, NY 10462-3126

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Susan Fanselow

22 December 2007

Mr. John Slown
U.S. Fish and Wildlife Service
New Mexico Ecological Services Field Office

2105 Osuna NE
Albuquerque, NM 87113

Dear Mr. Slown:

Thank you for accepting comments on this important issue via email.

I am writing to request that the US Fish and Wildlife Service take actions to better protect the endangered Mexican gray wolf. This is an incredibly important species in the southwestern ecosystem, and it deserves a real chance at reproductive success in the 'wild.'

To take a bold step in that direction requires that the USFWS includes a Conservation Alternative in the draft Environmental Impact Statement changing the classification of the wolves from "experimental, non-essential" to "endangered." Captive populations cannot safeguard Mexican wolves from extinction in the long-term.

Another critical change to the wolf program is needed. Please eliminate restrictions to wolf dispersal and movements. Wolves have large area requirements and need access to good habitat throughout their historic range. Capturing and relocating wolves that wander from the current arbitrary boundaries disrupts packs, thwarts expansion and dispersal of the population, and sometimes causes serious injuries to individual wolves. I would also like to see you expand the area for initial releases to anywhere within the Blue Range Wolf Recovery Area.

The US Fish and Wildlife Service must also stop killing and removing wolves. The current rule allows excessive wolf removal that is precluding achievement of the reintroduction objective of 100+ wolves in the recovery area.

Finally, please revise the outdated Recovery Plan. This plan--bizarrely--does not include objectives for full recovery of Mexican gray wolves, an essential element for any recovery plan.

Thank you for entering my comments into the public record. Please keep me informed of your decision.

Sincerely,

Renee Guillory

Brian Millsap

Dear Millsap,

My husband and I are supporters of scientifically sound wildlife

management who understand the value wolves can bring to ecosystems, We are writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

We are confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering our viewpoints on this incredibly important matter.

Sincerely,

Ms. Lorna Fantle

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Jack Dixon

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Nathan Pride
35246 Currier St
Wayne, MI 48184-2348

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Mike McKenna

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Analisa Crandall
815 Shady Grove Ln
Adkins, TX 78101-2706

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Iva Riddle
1302 Marydale Dr
Arlington, TX 76013-3634

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Russ Bonny
1980 Denver West Dr Apt 224
Golden, CO 80401-3136

Brian Millsap

Dear Millsap,

As a resident of New Mexico and land owner in the Sangre de Cristo mountains, I urge you to protect the Mexican gray wolf. There are fewer than 60 wolves in the wild lands of the Southwest. There are

millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a small, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

If you make these changes, the Mexican gray wolf recovery program, these wolves will have a chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoint.

Sincerely,

Dr. Susan Robinson

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Brenda Turiello

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Janice Higgins

Mexican Grey Wolf Napa Scoping Dear Ladies & Gents; It is my
experience
that humans are to blame for failure of your type of project. I
strongly
encourage public education to the fact that wolves are NOT monsters or
demons and "out to get you" or steal your children. Ignorance I believe
is
your worst enemy. Also those farmers willing to protect their
livestock
can take normal precautions such as pens and barbed wire. People's
stupidity never ceases to amaze me. I would never leave my child
unprotected! These animals are made out to blame when humans are
irresponsible idiots. Please educate these fools so these beautiful
animals can have a chance to be in their natural habitat which is
where
God intended them to be. Also, let them know there are other predators
out there also. Every time they loose a chicken it won't be a wolf. And
please tell whoever is responsible there are MANY who would adopt
wolf-dog hybrids; have them spayed or neutered and give them great
homes.
I personally have several friends who have done so. If I can be of any
help please email me at atmraven@msn.com or call 770-380-4845. Thank
you, Kim Butler 8444 Banks Mill Rd. Douglasville, Ga. 30135

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Christine Pratts

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. carolyn acuff

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Linda Yates

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Cecelia Bishop

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Tiffany King
45685 US Highway 72
Stevenson, AL 35772-6733

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Andrew Sutphin

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. B Logie

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Jennifer Peterson
2995 County Road BB
Madison, WI 53718-6572

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Michelle Arnold

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Brian Millsap

Dear Millsap,

Mexican wolf recovery is greatly in need of help. Please take every available action to support recovery efforts in the Southwest.

Wolves need our help. People were responsible for destroying them,

now people need to take responsibility for ensuring their survival. I sincerely hope that our species has finally evolved enough to understand that we SHARE our world with other species -- and that humans do not have a god given right to commit wolf genocide or genocide of any form.

Protect the wolves. Give them access to all lands. Get rid of egocentric rules that limit the number of wolves allowed to live. Live up to the promise of the Endangered Species Act. Do the right thing!

Sincerely,

Ms. Anne Schmidlin

Brian Millsap

Dear Millsap,

I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests.

There are millions of acres of public land in the Southwest where wolves could thrive. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Gerald Harper
3026 Redwood Ave
Lakeland, FL 33803-4345
