Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Sonia Herrejon

Brian Millsap

Dear Millsap,

Wolves are an important part of nature's system and need protection to survive. Your system is not working well so far and it needs to be improved, not cut back. As a supporter of scientifically sound wildlife management who understands the value wolves can bring to

ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Jan Roberts

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Tony Inkel

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Charmaine Slaven

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Sandra Christopher

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Kendall Tripp
1235 Elder Ave Apt 10
Boulder, CO 80304-2659

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who well understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following three changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse freely beyond the recovery area, and to be released where biologists say is optimum.

Third, don't limit wolf numbers, or allow any sleazy new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether measurable progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Dr. William M. Honsa

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Sherrie Staley
7141 Brittwood Ln
Flint, MI 48507-4621

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

Please consider that the Mexican wolf is an important keystone animal capable of restoring the health of the environment it lives in. These

are wonderful animals that need our protection. Now is the time in the United States for a difference in the way we view and treat our wolves. We who belong to Defenders and many who do not, want you to know that we care deeply for our wolves and are going to see that their safety and restoration will be fulfilled. The wolf is our first

passion and the reason why many of us joined Defenders. Won't you join with us.....knowing how strong our numbers are? Please save and protect our beloved wolves.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Connee Robertson

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Steve Sturgill
3520 Marlin Dr

Brian Millsap

Dear Millsap,

Please be open-minded to my plea. Wolves are very valuable animals, and deserve careful consideration.

As a supporter of scientifically sound wildlife management who

understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Karen Ingerman

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Norman Thornton
436 Pinon Creek Rd SE
Albuquerque, NM 87123-3901

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Randi Rosenblum

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Kenneth Gibb

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Grady Keystone

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Charles Nafziger

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Jeannie Holder

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Barbara Singer

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Darlyne Burns

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Tabitha Woodson
1155 Ryan Rd

Brian Millsap

Dear Millsap,

I have always hoped that this great country of ours would endeavor to help maintain the true and indiginous animals to our lands. It is essential that the Mexian wolf recovery efforts be given every intelligent opportunity to be successful. Please make sure that our

children can enjoy everything we have. It would be a tragedy to only find the Mexican Grey Wolf in books, historical films and caged in zoos.

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Natalie Kovacs

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Raina Kulinski

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Susan Pacey-Field

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Christina Williams
5852 Whitsett Ave Apt 4
North Hollywood, CA 91607-1169

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Miss Rhiannon Pare

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Lauryn Galindo

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Lynette Belew

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second,
ALLOW THE WOLVES TO DISPERSE BEYOND THE ASSIGNED AREAS and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

I own a home in the White Mountains of Arizona and understand the value of the wolves living near my home there. This isn't some far

off thing that doesn't affect me, and I welcome the wolves in my area. Please protect them and consider carefully their value to our precious ecosystem.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Patricia Perikly

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Ron Stepchuk

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Cindy Ridings
533 48th St
Baltimore, MD 21224-3115

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Kathi Kibbel
522 S Clinton Ave
Dallas, TX 75208-5917

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Grace Calvert

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Tim Barlow
