Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Emily Moddelmog

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Ms. Mary Jo Ballator

Brian Millsap

Dear Millsap,

Mexican Grey Wolves are a vital part of the ecology in the Southwest
United States. I urge you to pass legislation to allow them to stay
there.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Miss Elissa Senra-Sargent

Brian Millsap

Dear Millsap,

I am a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems. Please take a
more balanced approach to Mexican wolf recovery efforts in the

Southwest. After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

Mexican wolves must be "uplisted" to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Secondly, wolves must be allowed to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill

them. Ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

If you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Miss Barbara Wilkinson

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Suzanne Hesh

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Rachel Garms

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Anita Capshaw

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Ms. Irene Araneda

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Ms. Gloria Morotti

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Mr. David Redensky

Dec 21, 2007

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Mr. Donald Vickers

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. The Family

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Peggy Collins
204 Washington St
Killeen, TX 76541-5033

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Janet Waters

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Brian Millsap

Dear Millsap,

As a scientist that supports scientifically sound wildlife management,

I understand the value wolves can bring to ecosystems. I am writing to
urge you to prioritze Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wildlands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of our most endangered animals and play an
important role in restoring an ecological balance to the Southwest.
But despite these facts, we have not made much progress in restoring
them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Ms. Jora Rehm-Lorber

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

We need to step up, and do it now, before we loose another valuable species from the face of the earth.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Please don't let the lonesome howl of the wolf go unheded and do whatever possible to help them survive and prosper.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Julie Chapman

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Jennifer Pettit

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Ms. Karla Cruz

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Mrs. Geraldine Penland

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Ms. Elizabeth Starr

Dec 21, 2007

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Ms. Mari Lake

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Sumner Williams

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Mrs. Michele Brown

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Mr. Michael Airoldi
1201 Glen Cove Pkwy Apt 1011
Vallejo, CA 94591-7176

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Ms. Anna Twinney

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Jan McCreary

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Mr. Tom Nash

Brian Millsap

Dear Millsap,

I am writing to urge you to take a more balanced approach to Mexican
wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60

wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

I ask you to consider several courses of action:

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this significant matter.

Sincerely,

Mr. Drew Vande Creek

Dec 21, 2007

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who also
understands the value wolves can bring to ecosystems, I am writing to

strongly urge you to take a more balanced approach to the Mexican wolf

recovery efforts in the Southwest.

After ten-plus years of reintroduction efforts, there are now fewer

than 60 wolves in the wild lands of the Southwest, more than 40 wolves short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service certainly hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand clearly do not live up to the promise of the Endangered Species Act.

As one of over 900,000 members and supporters of Defenders of Wildlife, I am urging you to make the following changes in the reintroduction rule.

First, you should "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but it will also require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where the biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill

them. Ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am quite sure that if all of these changes were made, the Mexican gray wolf recovery program would get back on track and these wolves would have a real chance at recovery in the wild lands of the Southwest.

I want to thank you in advance for taking the time to considering my viewpoints on such an incredibly important matter.

Sincerely,

Mr. Dan Sullivan

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Meredith Needham

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Mr. Bob Sobecke

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Patti Sobecke
2153 S 90th St
Milwaukee, WI 53227-1623

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Carlos Delgado

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. David Gardner

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Mr. Nicholas Hentschel

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Nikole Austin-Earnhart
