Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Ellie Benson

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Rebecca Grundy

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Dr. Johannes Stratmann
125 Trent House Rd
Irmo, SC 29063-8402

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Jimmy Rivera

Brian Millsap

Dear Millsap,

DO WHAT IS RIGHT !!!

As a supporter of scientifically sound wildlife management who

understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Edward Guilmette
3040 W Angela Dr
Phoenix, AZ 85053-1916

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Debbie Harrell

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Sarah Sercombe

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter..... PLEASE SAVE THESE WOLVES, WE HUMAN'S ARE THEIR ONLY HOPE !!!!

Sincerely,

Ms. margaret bowden

Dec 21, 2007

Brian Millsap

Dear Millsap,

I am shocked to learn that ranchers and/or their workers are actually baiting cows to attract wolves so that they can be shot!

This is inexcusable and must be stopped.

Please look into this and stop this kind of thing at your earliest convenience.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Patricia Orton

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Kenneth Schultz
6161 E 4th St
Tucson, AZ 85711-1613

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Cheryl Barrango

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Eric Sheehan
5756 E 2nd St
Tucson, AZ 85711-1512

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Kate Skolnick

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Miss Ellen Green
5451 N.Waterfield Dr.
Tucson, AZ 85750

Brian Millsap

Dear Millsap,

As a wildlife biologist who has worked within 30 feet of these wolves in the Gila and as a supporter of scientifically sound wildlife

management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

For 2 years i watched firsthand a portion of ten years of reintroduction efforts. I saw its failure orchestrated by powerful interests! One rancher who we reported for illegal and repeated grazing in riparian areas threatened me! Must the Forest Service & FWS continue to cave to big money?

Now there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006. What a waste of precious taxpayer resources!

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them. I worked aside FWS staff and know that at the field level FWS puts fine people with good intentions into the field.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Paul Yoder

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Carol Rolf

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of slow progress, it's time for officials to take lessons from past failures and adjust their policies to secure a long-term future for wolves in our wild lands.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

WHAT SERVICE IS THIS TO KILL OUR DOGS ANCESTORS? INTELLIGENT BEINGS, UNLIKE HUMANS THAT MURDER FOR NO REASON AT ALL. LOOK AT THE PEOPLE WHO LIVE WITH AND HAVE WOLVES OR WOLF HYBRYDS. YOU ARE KILLING DOGS. SHAME ON YOU,. IT IS ABSOLUTELY UNNECESARY! WATCH EVAN ALMIGHTY AND TAKE THE TEST AT THE END OF THE SHOW. EVEN A CHILD HAS MORE INFORMATION ON THESE INCREDIBLE ANIMALS THAN YOU MURDERERS DO. I HAVE A WHITE WOLF, THE MOST SPECIAL OF ALL. HE WILL LIVE TO BE IN HIS 20'S!, LEAVE MY WOLVES ALONE..PLEASE STOP THE MASSACRES OF ALL ANIMALS IN OUR CHARGE.

ITS CRUEL, ITS WRONG AND WE HATE IT. THEY HAVE A HARD ENOUGH TIME WITH THE TAKING OF THEIR HABITAT. MORE DOMESTIC DOGS KILL LIVESTOCK THAN

ANY WOLVES DO. THEY CANT READ THE SIGN THIS IS MR JONES FARM, BUT THEY ARE HIGHLY TRAINABLE. MY WOLF WILL NOT CHASE HARM OR KILL ANYTHING THAT IS MINE. THEY ARE VERY VERY SMART. CAN YOU GIVE THEM A BREAK? STOP THIS ARCAUIC MADNESS NOW AND GET MORE PROGRESSIVE IN YOUR OUTDATED THINKING. MISMANAGMENT OF OUR WILDLIFE.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray

wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Janet Curtis

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. William Eyl

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Juanita Carra-Budzek
530 Hickory Rd

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Kathryn Vinson

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Bryan Frueh

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Laurie Carr

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Miss Ginni LaRosa
26536 Ridge Rd
Damascus, MD 20872-1900

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Eric Smith

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Janna Wiedemann
2175 Sierra Highlands Dr Apt I167
Reno, NV 89523-2311

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. judi andrews

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Margaret Minnick

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Robert Strebeck
509 Aransas Dr
Euless, TX 76039-7516

Brian Millsap

Dear Millsap,

I am writing as a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, and am urging you to take a more balanced approach to Mexican wolf

recovery efforts in the Southwest.

In a mere ten years of reintroduction efforts, there are still fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006. Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act. As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Miss Laura Hardison

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Ethan Tauber

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Diane Vogelman
PO Box 806

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Amanda Meyer

Brian Millsap

Dear Millsap,

We have the opportunity to set the record straight on wolves and right a wrong that has led to their near extinction. Please be a leader for what is right and not follow the money trail from special interest

groups and those that lobby congress on behalf of these groups. Please listen to scientist who have spent their lives studying these creatures and do not have a hidden agenda.

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Diana Crago

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who understands the value wolves can bring to ecosystems, I am writing to urge you to take a more balanced approach to Mexican wolf recovery efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Jade Astiazaran
